Perfect creations thanks to our long history

Historic Base

Trimline Fires fireplaces are modern and chic, filled with technological advances and suitable for almost any spot in your home. We've travelled a long road to get to this point.

thermoCet was founded in 1974 as manufacturer of gas fireplaces. From that point on we have grown significantly and expanded our business all over Europe. And now, here we are; Trimline Fires was launched in 2019.

2019 was also the year we started building our new facility. New offices, a good space for our R&D department to work on our upcoming projects and a beautiful new showroom.

Everything in-house for the best products

High Quality

Full of passion and dedication, we create gas fireplaces that will envelop your home in a sense of ultimate comfort, convenience and warmth at any moment of the day.

Manufacturing a fireplace is a lengthy process, and the less interference across the chain, the better. That's why we do everything in-house, keeping a handle on all aspects of creating our fireplaces. From our own R&D department with its own testing center at our headquarters in Woudenberg (The Netherlands), to our manufacturing and assembly.

Quality & sustainability, Trimline Fires fireplaces are premium grade. We believe that quality is everything. Extensive, meticulously perfected technologies are the standard. Our fireplaces are made to last a lifetime; durability is key.

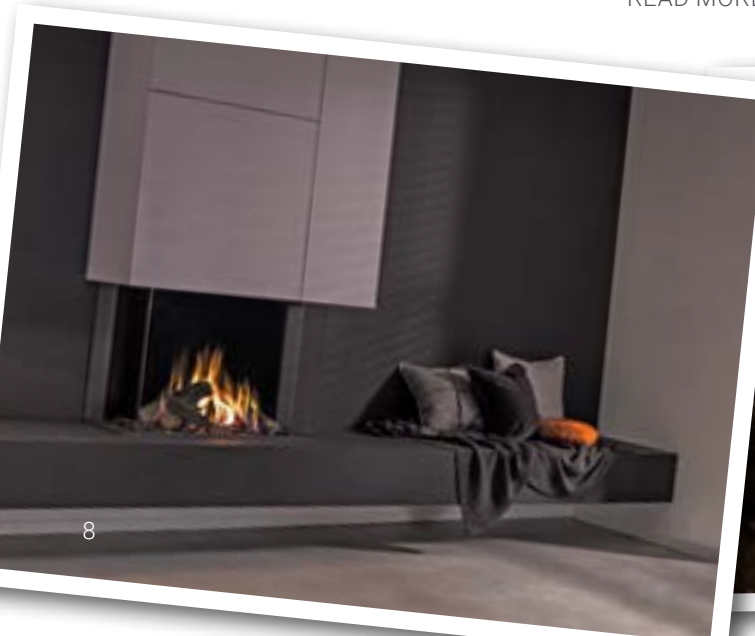

Customize the way you want to

Endless options. We create ultimate luxury by letting you customize your fireplace. Custom work is an important element of Trimline Fires. A fireplace serves as your house's style icon. With Trimline Fires, you're in control of creating the source of your future luxury and comfort. While a Trimline Fires fireplace will of course make your home warmer, literally speaking, from now on just the thought of coming home will warm your heart.

An important part of that is your freedom of choice. Besides many aesthetic options, we make no concessions in the realm of technology either. Technology and aesthetics will come together to reach every corner of your home. We do whatever it takes to create the ultimate experience for you!

* READ MORE ABOUT CUSTOMIZATION ON PAGES 72 - 75

Create your dream design @home

Glass that no longer acts as a mirror

The ultimate fireplace experience with anti-reflective glass. Trimline Fires fireplaces are more than just a standard gas fireplace. They create the ultimate fireplace experience. There is a lot to it – every single detail has to be just right. Perfection down to the very last detail. Technology plays an important part in this. For example, we offer the option of using anti-reflective glass. Create that authentic 'fireplace' feel with the help of our antireflective glass. Nothing stands between you and the flames besides a barely visible layer of glass.

Add the finishing touch to your fireplace

Smouldering embers, made out of glowing wool. Nothing is more beautiful and comforting than a fire burning gently, slowly but surely breaking down the wood and creating a bed of beautifully glowing embers. Even more for you to look at, and an even prettier fire! We've managed to perfect even the impression of smouldering embers down to the very last detail. Even on the very lowest burner setting, your fire will still be a joy to watch, with balanced flames and never ending.

You are in control

Controllability

The main advantage of a gas fireplace is its ease of use. No more fussing about with firelighters and wooden logs; simply turn on the fireplace using a remote control and enjoy. You also don't need to wait around for the fire to die out before you get to go to bed. Simply push the button, turn off the fire and turn in for the night. Having a fireplace has never been easier! We offer several options for turning your fireplace on and off, in line with your wishes. Whether you use the remote control, the puck or the Wi-Fi app, anything for an optimal, comfortable experience.

* READ ABOUT OUR REMOTE CONTROLS ON PAGE 76

We have the best looking fire

The best looking fire

State-of-the-art technical ingenuity creates the ultimate cosy fire for you. The passionate interplay of the flames, visible from all corners of the room, moving and warming you. Feel the warmth of knowing that you're home. That you're loved. A sight to behold.

It may sound like a cliché, but it really is true; the movement of the flames also moves you. Fire has a magical, spiritual quality, and Trimline Fires fireplaces have that quality too. Our R&D department is working hard to create that quality every single day.

B

Trimline 38 Front

Living in a small home does not necessarily mean having fewer options!
The Trimline 38 Front is a very compact frontal fireplace, making even the smallest rooms feel cosy and inviting. It creates a luxury ambience with a single press of a button. With this fireplace a direct wall termination is possible. No chimney needed.

*The smaller, the better!
Even the smallest room in your
house can be turned into the
coziest one with this fireplace!*

The version of the Trimline 38 Front shown here has been installed low to the floor, to create the same kind of feel as a traditional fireplace with mantle. The standard version has a burner bed made of wooden logs and a lamelas interior. This fireplace also comes in a two- and three-sided version. On top of that, it comes with the Ecomax remote control and you have the option of adding Wi-Fi-control with our Trimline Fires app.

FEATURES

OPTIONALS

B

Trimline 46 Front

Do you have a small home and the desire to have a fireplace?
No problem; the Trimline 46 Front has got you covered,
and is perfectly stylish to boot. Be captivated by its flames.
The Trimline 46 Front can be installed with a direct wall termination.
No chimney needed.

First-class looks that will light up your home, both literally and figuratively.

The standard version of this frontal fireplace has a burner bed made of wooden logs and a smooth steel interior. On top of that, it comes with the Ecomax remote control and you have the option of adding Wi-Fi-control with our Trimline Fires app.

FEATURES

OPTIONALS

B

Trimline 63H Front

Do you have a narrow, sloping wall in one of your rooms, and are you looking to add warmth and cosiness to your home? The Trimline 63H Front could be perfect for you. This frontal fireplace can be installed in even the smallest spaces. The Trimline 63H Front is a gas fireplace with a double burner, which creates a beautiful interplay of flames while limiting the amount of heat being generated.

*A unique fireplace with a very shallow mounting depth.
Fits perfectly in small, slanted walls.*

The standard version comes with a burner bed made of wooden logs and a lamelas interior. On top of that, it comes with the Ecomax remote control and you have the option of adding Wi-Fi-control with our Trimline Fires app.

FEATURES

OPTIONALS

B

Trimline 70 Slim Line Front

Discover the possibilities of the Trimline 70 SL with Integrated Heat Box

With an innovative, versatile design the compact Trimline 70 Slim Line is easy to install and simple to service. The Trimline 70 SL can be wall mounted and installed directly to any internal outside facing wall. One of the biggest advantages is that there is minimal building work required. The Trimline 70 SL will fit perfectly with virtually all interiors with sleek lines for a contemporary living statement.

Integrated Heat Box

When the Trimline 70 SL is installed with the Integrated Heat Box, it allows you to construct the installation from combustible materials making the fire a versatile choice in most modern building applications.

The standard version of this only 155mm deep frontal fireplace comes with a burner bed made of wooden logs and a lamelas interior. It also looks great with other types of interiors, such as black glass or vermiculite. On top of that, it comes with the Ecomax remote control and you have the options of adding Wi-Fi-control with our Trimline Fires app.

FEATURES

OPTIONALS

A

Trimline 73 Front

Are you looking for a generous landscape fireplace, without having to sacrifice too much valuable space? Go for the Trimline 73 Front. It's the smallest landscape fireplace Trimline Fires offers and promises to elevate any room. Thanks to its double burner, the flames are both beautifully vibrant and energy-efficient.

Creates a luxurious ambience in any room. This frontal fireplace is equipped with a double burner.

The standard burner bed for the Trimline 73 is made of wooden logs, and the standard interior has a slatted design. On top of that, it comes with the Ecomax remote control and you have the option of adding Wi-Fi-control with our Trimline Fires app.

FEATURES

OPTIONALS

A

Trimline 73H Front

This generous frontal fireplace will turn any room into a warm, comfortable space. The Trimline 73H Front is suitable for a range of interior styles and will provide the finishing touch for your interior vision. It can be built in, but also looks great combined with a traditional mantle. Its double burner will give you the dynamic fire of your dreams.

A romantic fire at your disposal whenever - perfect as a built-in or combined with a more traditional mantle.

The standard version of this frontal fireplace comes with a burner bed made of wooden logs and a flat steel interior. It also looks great with other types of interiors, such as tile, brick and lamelas interior. On top of that, it comes with the Ecomax remote control and you have the option of adding Wi-Fi-control with our Trimline Fires app.

FEATURES

OPTIONALS

Interiors

Translate your desires
into stunning designs

Thanks to our many interior styles, any setting can be created. You decide on the ambience that your future fireplace will exude. Become the master of your design – that of your fireplace, and of your whole room by extension. Our interiors are designed in such a way as to match any decor.

The start of finding your own style is having many options. Trimline Fires gives you those options. Chamber linings with many different styles and designs. Discover the options and translate your desires for your fireplace into stunning designs.

*Which interior lights
a fire in your heart?*

Rock-patterned

Classic and stylish, with playful details. Perfect for people whose style is more casual and informal. The rock pattern will give your fireplace a sense of authentic charm.

Grooved panels

This sleek, modern, eye-catching backdrop will add interest to your fireplace and room. The grooved linings create a magical interplay between flames and design. Sleek and modern – the kind of interior that will continue to captivate, year after year.

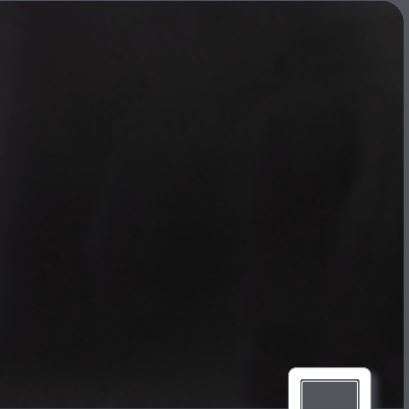

Lamelas interior

Let the fire speak for itself. When it comes to our lamelas interior, it's all in the details. Beauty in all its simplicity. Enjoy the fire.

Glossy black glass

Glass is always special, especially when featured in a fireplace – even more so when the glass is black, and the fire starts playing against it – the glass exudes a uniquely warm, charming ambience that is both chic and elegant. On top of that, the glass reflects the fire, doubling the number of flames.

Anthracite steel

Experience double the effect! Our anthracite steel interiors have a slightly reflective quality, reinforcing the play of the fire for double the enjoyment. Zero concessions have been made in terms of either technology or design.

Vermiculite

Your fireplace should feel like a warm blanket enveloping your home. Snug, cosy and utterly comforting. If you want to embrace the beauty of mother nature and a sleek look for your fireplace, choose vermiculite.

Brick wall

Traditional brick fills your fireplace with romantic ambience, exuding authenticity. The different shades of brown in the brick add a playful, cheeky note. Stunning!

Fuelbed options

The wellspring of your flames

The way the flames dance in your new fireplace will depend in large part on the burner bed, also known as the ‘fire bed’; the wellspring of ultimate warmth and comfort in your home. The perfect combination of technology and design.

Apart from determining the movement of the flame, the burner bed also sets the tone for the rest of the fireplace. It is the foundation of your fireplace’s design. Are you one for sleek, clean looks, or do you prefer the romance of wooden logs? Anything is possible!

*Anything for your personal style.
Ultimate customization.*

PURE AUTHENTICITY

Wooden logs

Wood suggests warmth and comfort, even when it's not yet been lit. And then once you do light the fire, an atmosphere of nostalgia and romance is created. Pure authenticity! You can never go wrong with a burner bed made of wooden logs.

ITALIAN CLASS

Carrara stones

Pure, unadulterated elegance. Straight from the marble quarries of Carrara, Italy. Suitable for a wide range of decors, from sleek and minimalist to traditional.

BACK TO BASICS

Basalt

Basalt and fire are inextricably linked. Basalt is essentially solidified lava, so a burner bade made of basalt takes you back to the origins of the fire. A beautiful material to help you create your dream decor.

NATURAL BEAUTY

Pebbles

Natural beauty to give your fireplace a rustic personality. Play around with natural elements to create the ultimate country feel – for those who like a more rugged look.

Remote control

Experience maximum comfort & ease of use

The main advantage of a gas fireplace is its ease of use. No more fussing about with firelighters and wooden logs; simply turn on the fireplace and enjoy.

You also don't need to wait around for the fire to die out before you get to go to bed. Simply turn off the fire and turn in for the night. Having a fireplace has never been easier! We offer several options for turning your fireplace on and off, in line with your wishes. Anything for an optimal, comfortable experience.

Ecomax remote control

Thanks to our standard remote control, you'll never have to get up from your chair to light a fire or put it out. This remote control will give you maximum control over all of the options. It even has a built-in thermostat feature.

Wall mount bracket

With this optional wall mount, it becomes nearly impossible to lose your remote control! Moreover, the remote control's standard thermostat feature functions best when the remote control is placed in its wall mount.

Trimline Fires App

Want to use your tablet as a remote? No problem! You can download our app on your tablet and control your device with a simple swipe.

Find more information on:
www.myfireapp.com

Trimline Fires App

Home is where the heart(h) is... Control your fireplace with our app. Easy does it. Anything is possible. Always have your remote within reach on your mobile phone!

Find more information on:
www.myfireapp.com

Wall switch

Have a fixed place in the house for operating your fireplace's main features:

- ON and OFF switch
- High or low flames
- Double burner controls
- Standby switch

If you choose to have a wall switch, you can rest assured that you will never lose the remote control!

Puck remote control

The Puck is a remote control which allows you to control your fireplace and enables you to use our popular Trimline Fires app. The buttons with blue background lighting allow you to turn your fireplace on and off and regulate the height of the flames. The Puck can be attached to a wall and can be used as a thermostat.

Trimline Fires creates comfort.

Installation

Cutting edge technology

Behind the warmth and comfort lies a whole world of innovation and technology. A world where safety is our main priority and our knowledge and skills making sure you can enjoy your fireplace.

Innovation and technology

Ultimate convenience. We excel at technological ingenuity. If you've seen one of our fireplaces before, you will know that they burn bright and true. There is a lot that goes into creating these vibrant, steady flames. Innovating and the perfecting of our technologies are crucially important for creating the ultimate ambience and a perfectly burning fireplace, especially for gas fireplaces. This is the only way to create the perfect ambience for your special moments.

We specialise in gas fireplaces and gas heaters. We do everything in-house, from beginning to end. We've been doing this all day, every day since 1974, full of passion and dedication. From initial testing in our workshop to the final creation in our manufacturing facility. We do whatever it takes to create an unparalleled, supremely comfortable fireplace experience for you in your home!

Trimline Fires & Installation

Trimline Fires gas fires are easy to install. Each gas fire comes with all the necessary and required installation materials, like leveling feet to adjust the height of your fireplace, a built-in cabinet which houses the entire set of controls and a convection cabinet with grating for a comfortable heat distribution.

Energy Rating labels

An energy rating is simply a way of measuring and showing how energy efficient an appliance is, according to how much energy it consumes. This tells you how efficient our devices are.

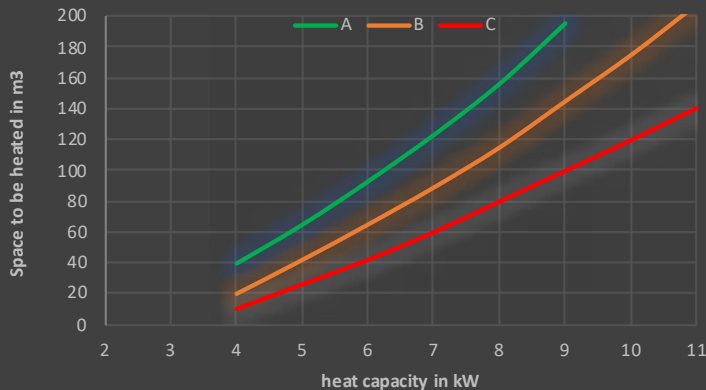

- A Energy rating label A
- B Energy rating label B

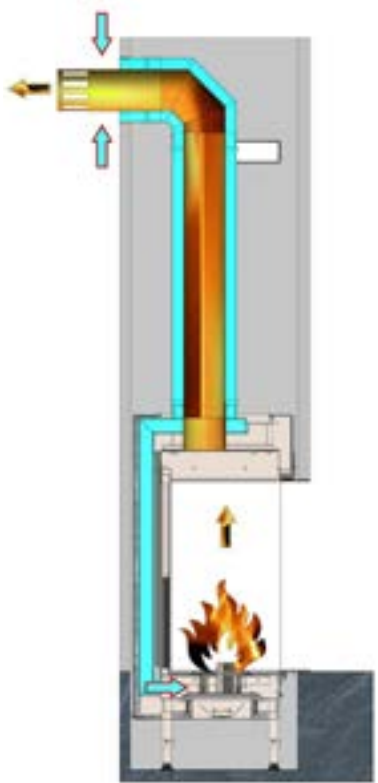

Heat capacity

When buying a Trimline Fires gas fire you can determine the necessary heat capacity. In many cases our gas fires are used as an (extra) heat source when it gets cold.

By measuring the volume of the room in which the gas fire will be placed and by using the chart below, you can determine the required heat capacity.

- A = a home with double glass, floor and wall isolation;
- B = a home with double glass and reasonably well isolated (house from ± 1974 - 1980 or renovated, older properties)
- C = a home with poor isolation

Closed gas fires

Trimline Fires need oxygen for a good combustion to take place. These gas fires have a so-called closed flue gas outlet and air supply system. The combustion air comes directly from outside. The biggest advantage is that oxygen does not get drawn from the room, which means there is no need for extra ventilation.

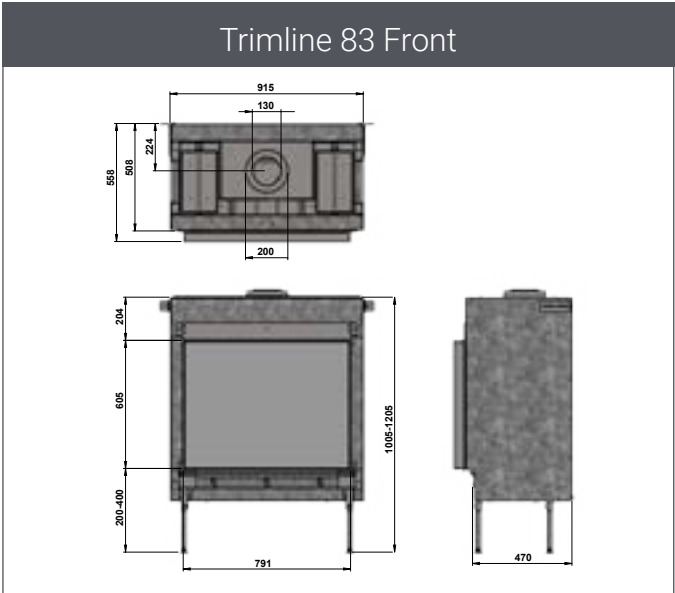

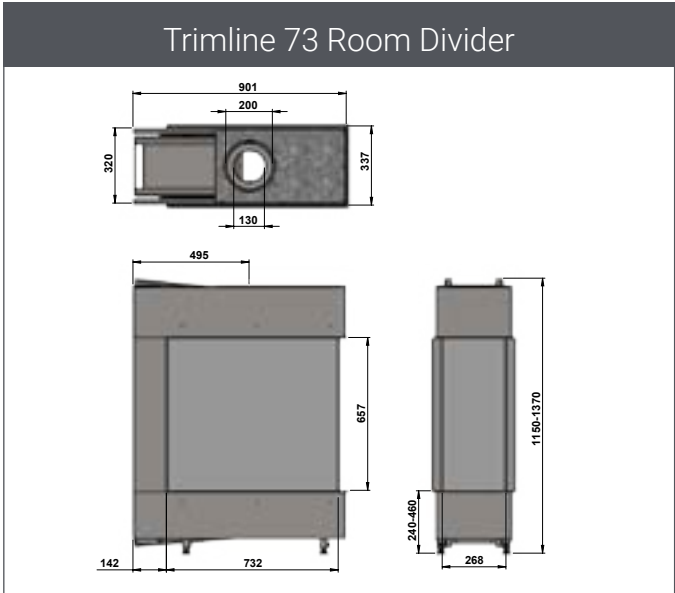

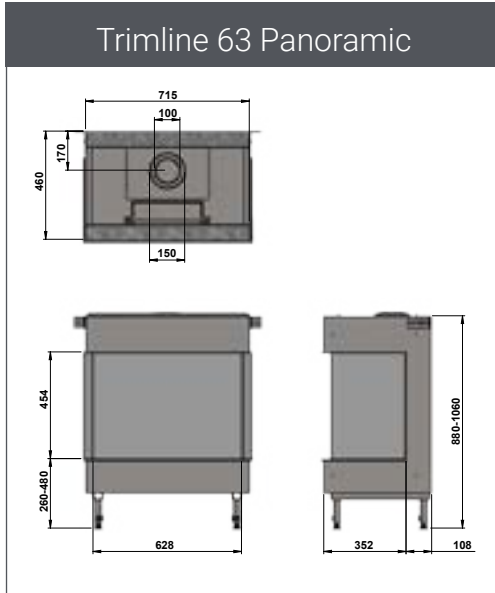

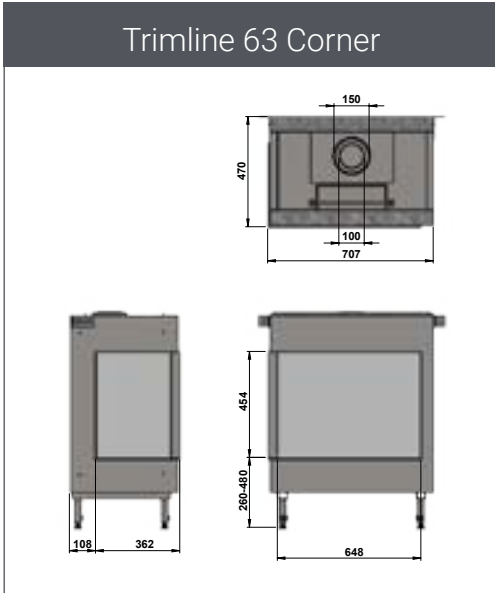

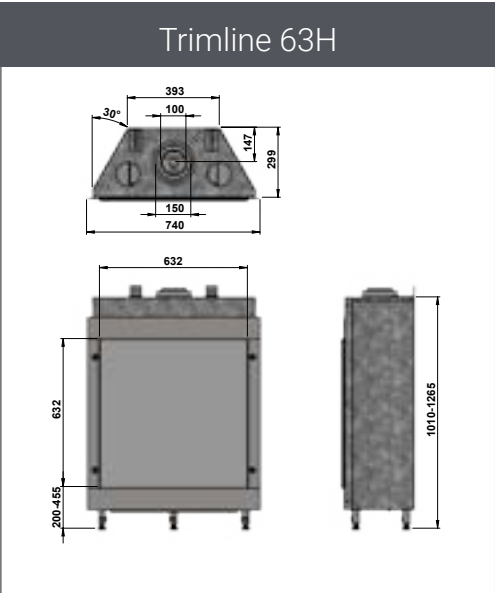

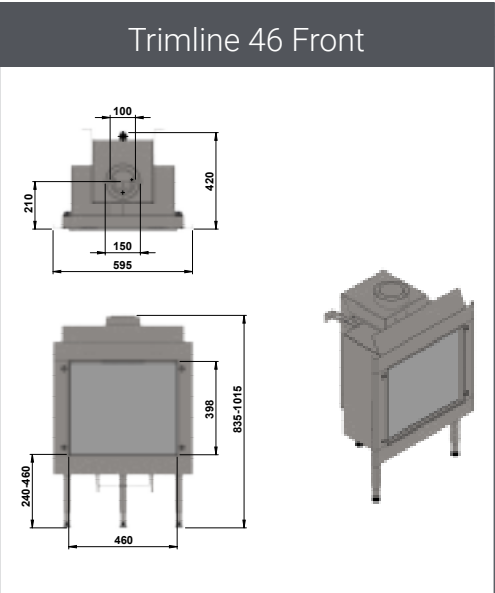

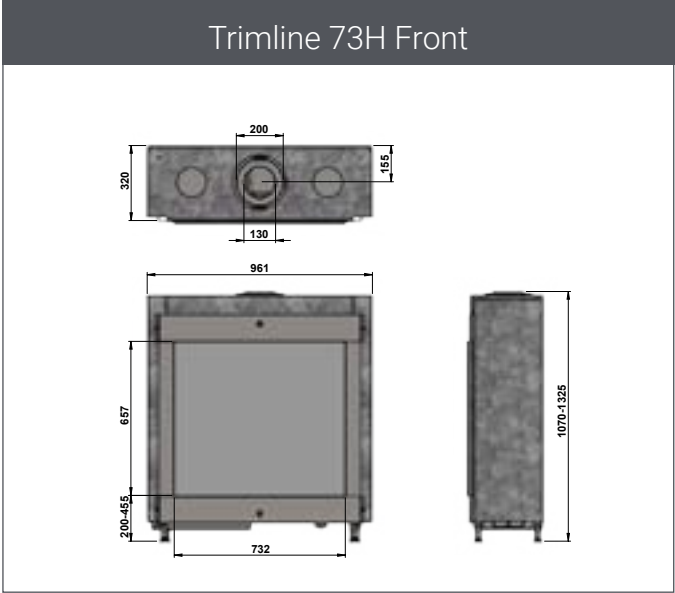

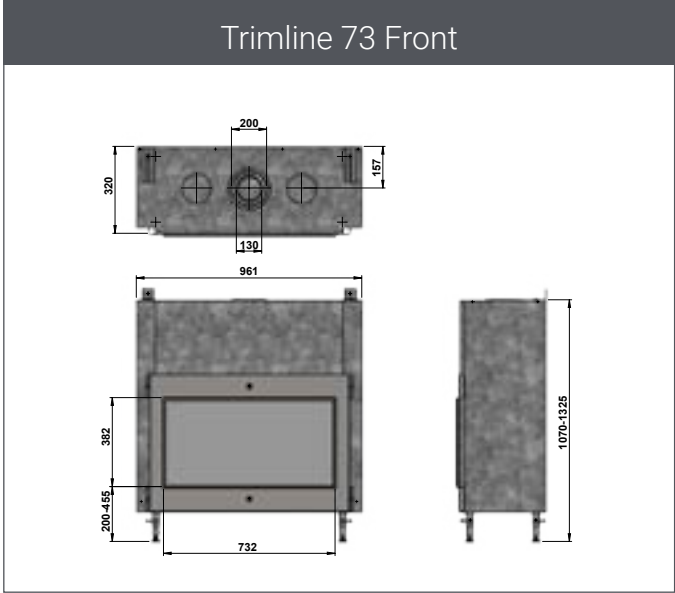

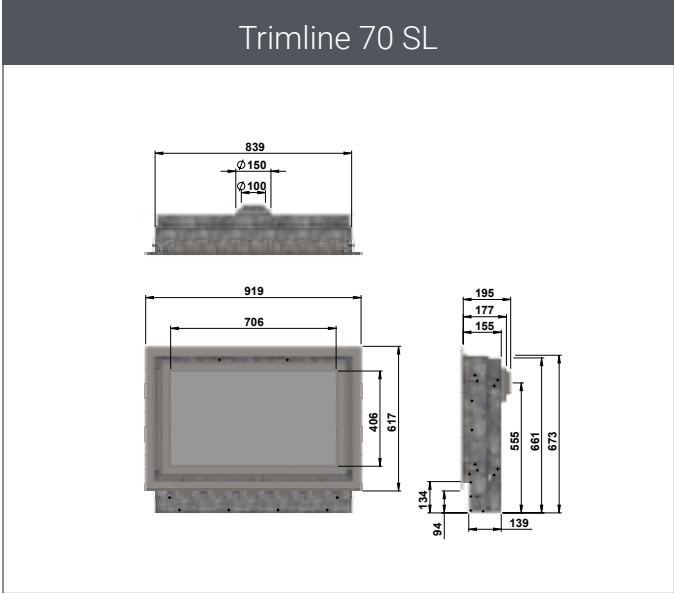

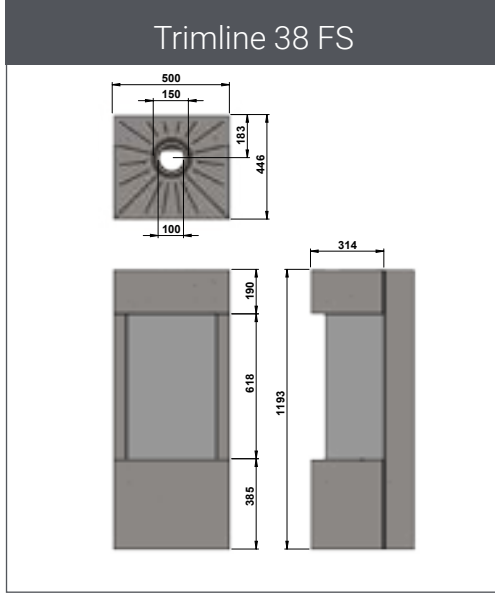

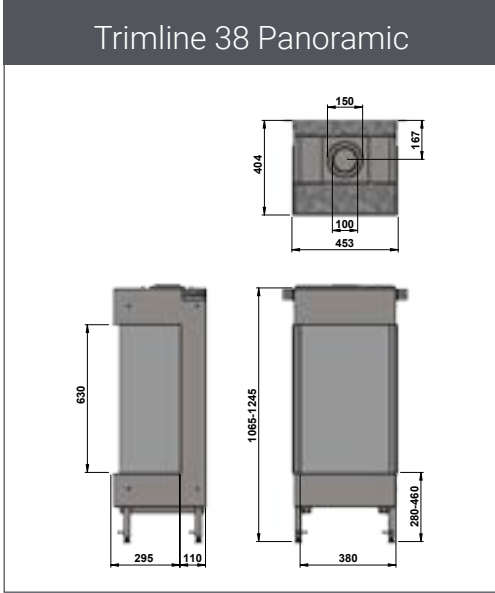

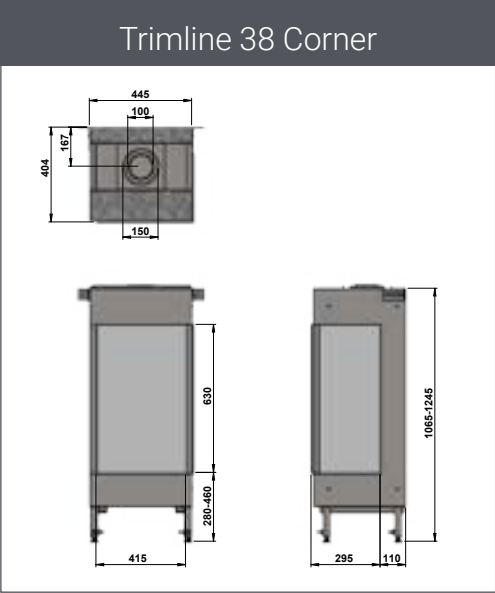

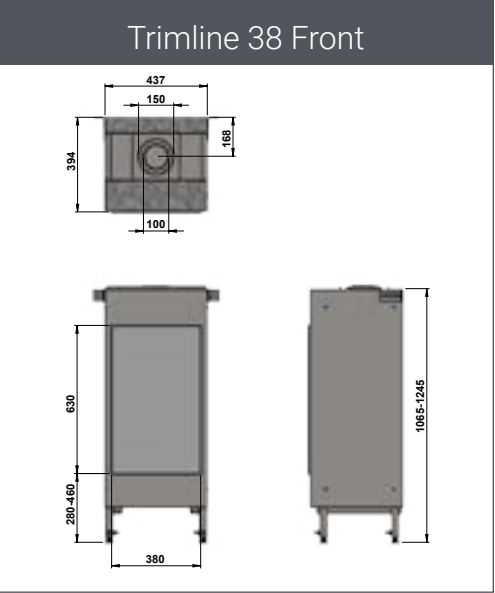

Trimline Fires & flue gas exhaust systems

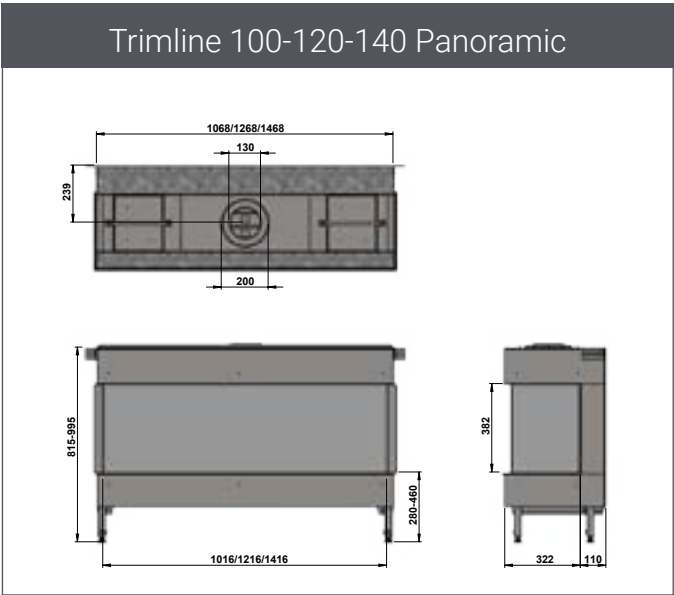

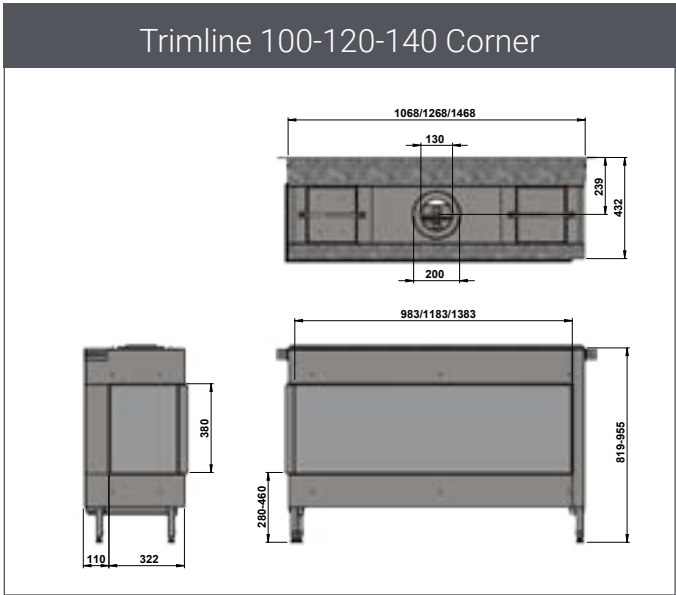

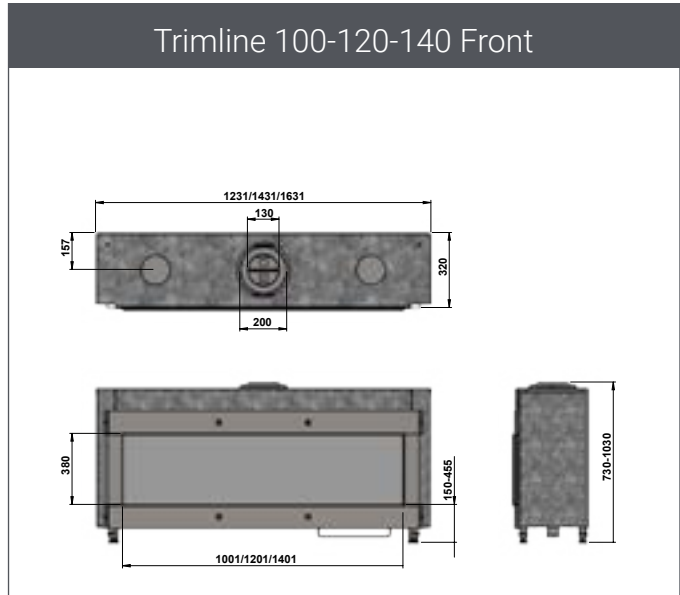

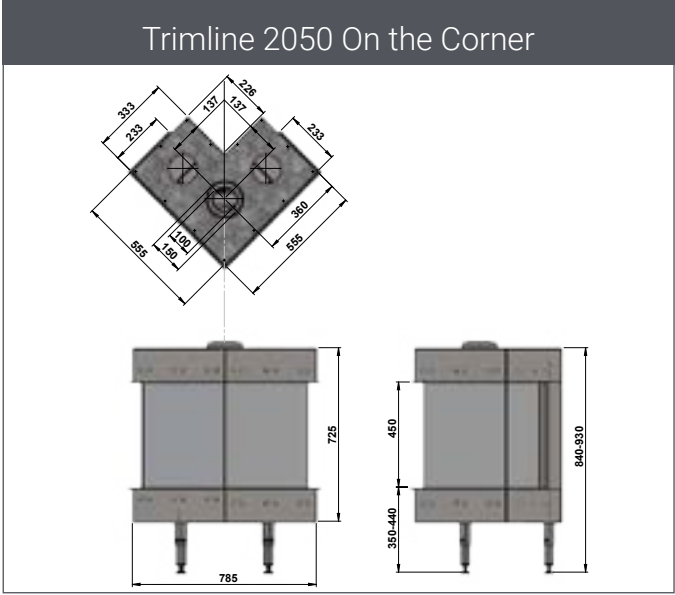

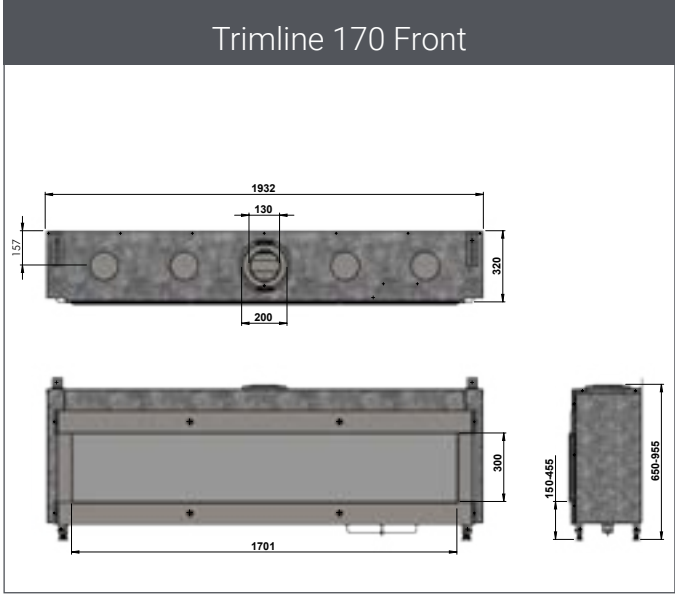

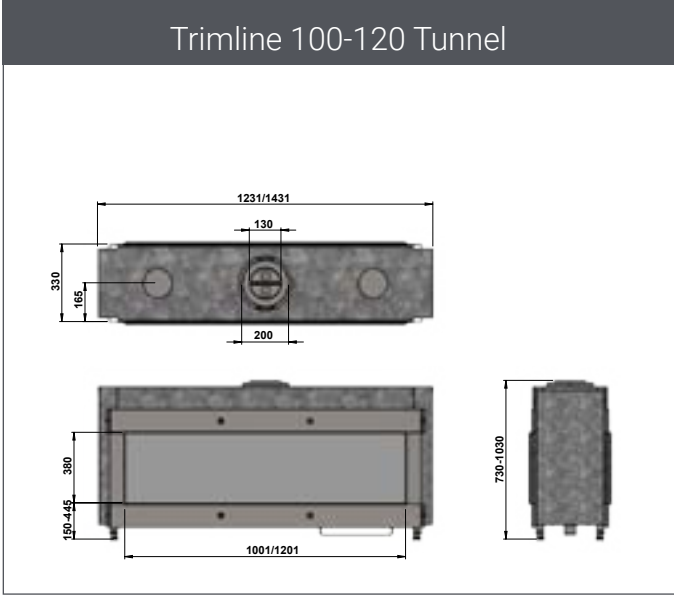

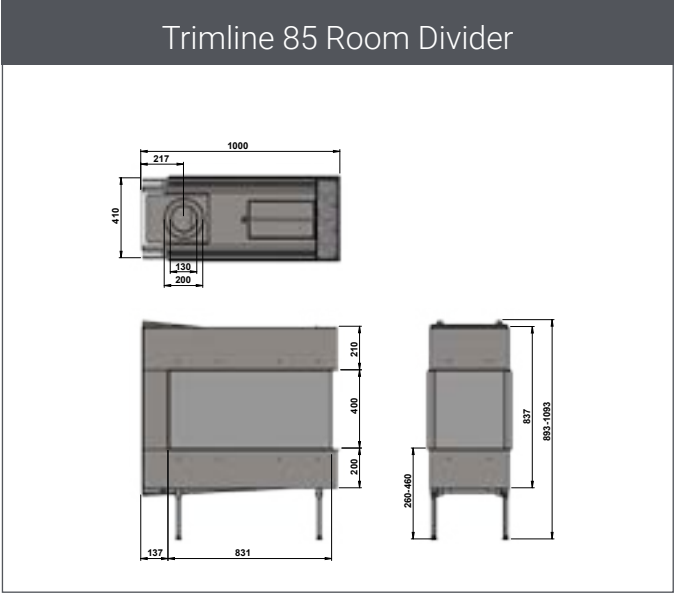

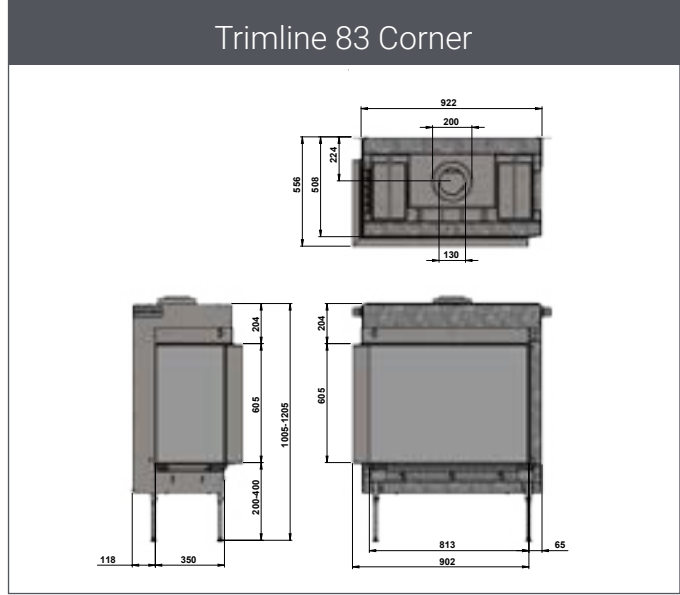

Trimline Fires use so-called concentric flue gas exhaust systems. This compact system makes sure the flue gases are safely discharged and combustion air gets added. This system is applied with Trimline Fires and offers excellent installation possibilities. This way you don't have to work with a traditional chimney and you can use your frontage for discharge.

We recommend our partner Holetherm CC for the best concentric assortment. You can find more information about the concentric flue gas exhaust systems in the Holetherm brochure at www.holetherm.com
